Print-n-Cut Sign Making Systems
100% Vectors • Full Color • 1,600 Illustrations*

Full color illustrations for printing with separate, matching cutpaths.

Plotter Art™

PRINT-N-CUT COLOR COLLECTION

*High Quality Digital Artwork for
Print-n-Cut Signmaking Systems
100% Vectors • Full Color • 1,600 Illustrations*

Process color, all vector illustrations for printing with separate, matching cutpaths.

- 100% vector files. No strokes or bitmaps. Fully scalable with no loss of quality. Process colors - no need for chokes or traps.
- Highly detailed images with extensive use of gradients and blends which have been enhanced for smooth, banding-free printing at large sizes.
- Separate, matching cutpaths created from the vectors of the original artwork.

- Special enriched color versions for Gerber Edge and Maxx thermal print and cut systems in Gerber PLT format.
- Choose the file format best for you from among:
EPS for PC • EPS for Macintosh • Gerber PLT • CorelDRAW CDR.
- 8.5" x 11", 130 page full color User Guide and Image Catalog that makes finding the right image easy.

PRINT-N-CUT COLOR COLLECTION

How to Use Print-N-Cut Art Files

Print-N-Cut art files are supplied with a full color vector image on the left and a matching vector cutpath on the right.

1. Open or import the art file into your program's workspace.
2. Inspect the print image and make any desired changes that do not effect the size.
3. Inspect the cutpath and delete any portions not wanted. Change the attributes of the cutpath to match the cut requirements of your program.
4. Insure that the print image and the cutpath are each individually grouped.
5. Select both objects and justify them on both the vertical and horizontal center axes.
6. Group the print image and the cutpath together.
7. Position the artwork in your layout (if part of a larger layout) and proceed with sizing it or any other global changes required.
