FastTRACK® - Remnant Tracking System 32Bit

FastTRACK® is a simple to use system for tracking remnants for processed plate. FastTRACK® will instantly search your database for all remnant types which match the given specifications for type and thickness, display the matches graphically on the screen, and print a report or drawing from your printer.

FastTRACK® will make Stocktake a matter of reconciliation, not measurement. Each plate is numbered as it enters the system. This number and metallurgical data cannot be changed, providing a high degree of traceability for quality control and for cut parts tracking through use of the FastCAM® Nesting system - FastNEST®.

FastTRACK® Includes the following features:

- ✓ storage of an unlimited number of plate shapes as instantly dimensioned drawings.
- ✓ automatic dimensioning of displayed drawings.
- ✓ automatic calculation of Area, Weight, and Cost.
- ✓ storage of heat treatment number, mill plate number, order number, original plate size, supplier...
- ✓ immediate stock reports by material, grade, thickness, value and shape.
- ✓ rapid search of remnant stocks for a specific size, material, grade and thickness.

TECH INFO

True 32Bit Windows 95/98 and NT Compatible

Min hardware spec:

PC with Pentium processor 64Mb RAM

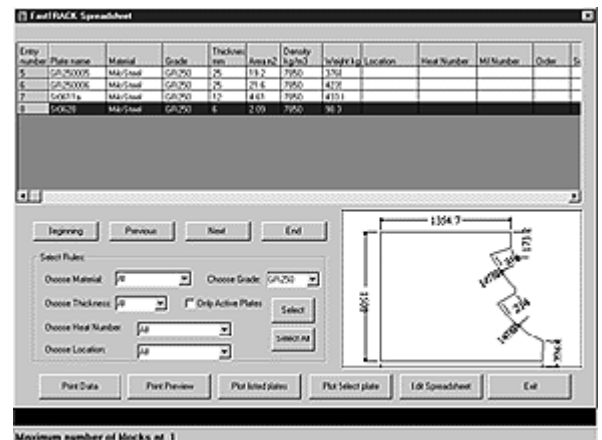

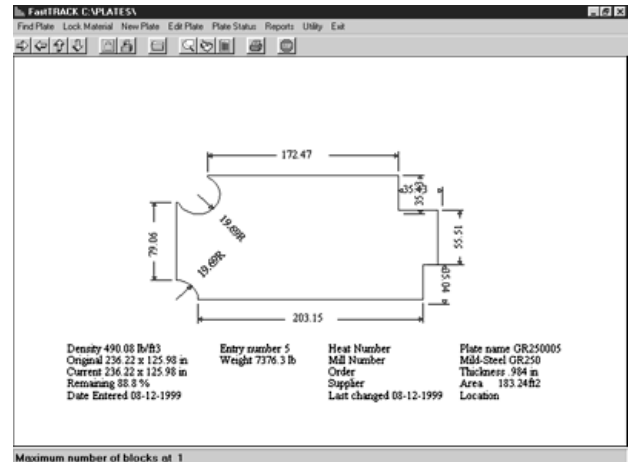

and Windows operating system.

800 x 600 graphics
